

Power-by-the-Hour

tailored to support your fleet

AJW delivers a power-by-the-hour (PBH) service for commercial, business and defence aircraft.

It guarantees the supply, repair and overhaul of rotatable components within all ATA chapters to the latest modification status. We impose no restrictions or limitations, whatever the airline's fleet size.

Why choose our power-by-the-hour solution?

We are an integrated partner, delivering high quality, innovative and reliable supply chain solutions, which gives you more time to focus on your customers.

flexible
power-by-the-hour service

tailored
component inclusions for airframe and engine LRU's

simplified

- component repair and overhaul management
- warranty management
- contractual purchasing
- ad-hoc C&E support
- logistics and transport services
- ad-hoc support for any components outside PBH programmes

A PBH product that delivers

speed efficiency quality reliability communication cost

repair management

our repair management team deliver first-class turnaround times, backed up with over US\$500m exchange ready inventory, helping to reduce AOG call-outs and maintenance costs.

logistics

delivering a world-class export and freight service, you'll have access to our global logistics partners who handle over 200,000 imports and export orders a year.

customer portal

providing secure online access 24/7/365 to view orders, track shipments, access part certification and manage off-core returns in real-time. The portal, which is both responsive and interactive, can also be integrated by an electronic data interface (EDI) with your IT platform.

AOG service

whether included as part of a contractual agreement or as a one-off request, our AOG team will ensure your aircraft is back in the air with minimal delay.

on-site stock

availability of stock at your operations base is vital for good dispatch reliability. We will work with you to position the right stock, in the right place, at the right time.
